

PRESS RELEASE

31 JULY 2025

Fichet Group awarded CSPN certification for the SMI Server solution

Fichet Group, a longstanding leader in security, has reached a new major milestone by obtaining the **First Level Security Certification (CSPN)** awarded by ANSSI for its **SMI Server access control solution**.

A demanding certification, a mark of excellence

This prestigious certification confirms the **robustness of the SMI solution, both physically and cybernetically**. The CSPN certifies that the SMI range meets the highest security standards.

KEY POINTS OF THE CERTIFICATION

Enhanced physical resistance

The equipment is designed to effectively withstand physical attacks, ensuring optimal protection.

Comprehensive software evaluation

The SMI Server software features a secure, end-to-end encrypted architecture validated by ANSSI.

Regulatory compliance

Meets European and French standards, including the NIS2 Directive and the Cyber Resilience Act.

A unique position in the market

Fichet Group thus becomes the only manufacturer in the sector to hold a CSPN certification covering the entire security chain: from the reader to the central software, including the physical equipment.

This recognition highlights the coherence and complementarity of our approach, combining enhanced physical protection with high-level cybersecurity.

The group is committed to being **"forever first"** in guaranteeing a high level of security to its clients.

Third certification for the SMI range

This new certification adds to two previously obtained ones, demonstrating the strength and maturity of the SMI range, which combines:

- **Technical performance**
- **Operational resilience**
- **Advanced cybersecurity**

This recognition is part of a continuous improvement process: Fichet Group continues its efforts to go further, anticipate emerging threats, and offer ever more reliable and secure solutions to its current and future clients.

ABOUT FICHET GROUP

For over 200 years, Fichet Group has been designing, manufacturing, and distributing security solutions recognized worldwide. Thanks to a unique combination of technological innovation and expertise, the group protects assets, people, and critical infrastructure.
