MILIPOL WORLD FAIR: FICHET GROUP

INNOVATES FOR
DEFENSE AND
HOMELAND SECURITY

Pavilion 5 | Stand H163

The forthcoming MILIPOL world fair scheduled in Paris (October 19-22, 2021) will showcase Fichet Group's capacity to mobilize its expertise in the service of Defense and Homeland Security with innovative solutions designed to preserve safer living for everyone in a world of growing threats and ever-increasing security risks.

FRENCH EXPERTISE IN THE SERVICE OF PROTECTING INFRASTRUCTURES

Security is now a strategic factor in the management and preservation of continuity for all operators of sensitive infrastructures facing higher levels of risk. With its threefold expertise in building protection, secure storage of valuables and electronic security, Fichet designs certified active and passive security solutions enabling its clients to counter threats by building up their resilience.

Fichet Group's manufacturing capacity rests on two company-owned production sites in France. This local implantation reflects our commitment to preserve an innovative and attractive industrial fabric in our home country. Thanks to these technologically advanced facilities, Fichet Group maintains full control over all processes - from product design to serial production - in compliance with ISO 9001, ISO 14001 and ISO 45001 standards.

SECURITY DOORS AND PARTITIONS: A KEY TO PROTECTING SENSITIVE AREAS

Fichet is France's leading manufacturer of security doors, windows and walls. Partnerships with state security - army, police and Gendarmerie services - have allowed our Group to design new products answering the diversity of threats and modes of operation.

Fichet solutions protect:

- The **outdoor periphery** of sites to prevent any intrusion or attack with bullet-resistant enclosures, checkpoints and guard posts;
- The **access perimeter** of buildings to protect staff and assets with security doors, windows, curtain walls, intercom reception desks, etc.;
- The **inside of buildings** to impede the progress of intruders and oppose final obstacles with automated doors, airlocks and security doors protecting highly sensitive or confinement areas.

DorTek security doors: upgraded resistance to armed attacks

This range of armor-plated security doors with full panels or infills offers certified ballistic resistance up to the highest levels (grade FB7). A tailor-made solution that can be combined with other types of protection, e.g. break-in resistance.

BlasTek and DarTek partitions for multi-resistance against new levels of threat—from vandalism to terror attacks

An extensive range of security doors and partitions to combine superior break-in resistance, ballistic resistance against military-grade weapons (e.g. Kalashnikovs) and effective blast resistance against package bombs, car bombs or industrial accidents.

Modular Security Enclosures (MSEs): tailor-made protection to upgrade physical security

Fichet manufactures armor-plated enclosures with certified break-in and ballistic resistance (up to grade FB7) to allow you to upgrade security on existing premises or create final as well as provisional secure spaces.

Standard or customized to fit your dimension requirements, MSEs can integrate all devices and equipment answering your operational constraints.

ELECTRONIC SECURITY: SEAMLESS SECURITY WITH A MUST SUPPLEMENT TO PASSIVE PROTECTION

Also a reference provider in the field of electronic security systems integration, Fichet offers solutions for every aspect of site security—from access control procedures to full spectrum security supervision. Widely acknowledged for their ergonomics, these site-supervision solutions integrate CCTV, intrusion detection and biometric identification and authentication systems to interact with all devices protecting your buildings.

Electronic systems under cyber-protection

Fichet is the first supplier in France ever to have secured ANSSI approval for its SMI Server physical access monitoring system. Designed specifically for high-risk sites and Vital Importance Operators, SMI Server allows for real-time management of individuals accessing sites via permanent checks on the legitimacy of their presence in successive areas. Under supervision from a single platform monitoring operations, it ensures perfect traceability of all events and actions.

COM'IN: simplified and fully secure management of visitors

Designed to optimize visitor experience, Com'IN simplifies management of all processing operations—total friendliness while preserving compliance with site security constraints. Com'IN takes advantage of the most recent web-based technologies and can be implemented both with cloud and local hosting on your premises. Its visitor terminal is also 100% "touchless" to allow for entrance reception with or without staff on duty.

"Our market is becoming more and more complex—with ever higher expectations. Our choice is to position ourselves prominently as a manufacturer and to invest heavily in R&D and innovation. Our ambition is to become Europe's reference medium-size company for this market."

Julien Laforets,
President of Fichet Group

ABOUT FICHET

Fichet Group is France's leading supplier of equipment, services and IT-ecosystems dedicated to the security of private organizations and government institutions against all types of risks—from basic to extreme.

Fichet designs gradual protection environments based on the complementarity of resources to protect the personnel, data and material assets of its clients.

Fichet Group operates in France (with 14 local branches and 2 production sites), Belgium and Luxembourg. It also exports internationally.
