MONEO

Mechanical Combination Lock

Our patented Moneo combination lock was specifically designed and developed by Fichet R&D teams to equip high security products. MC4 and Moneo locks share the same locking principle but Moneo models rely on 7 dials instead of only 4. This feature allows for very high performance levels—acknowledged by the most stringent European test laboratories.

PERFORMANCE AND SECURITY

- ✦ 7 dials with 63 million possible codes
- ✦ Designed to be fitted on high risk safes and vault doors; Grade-C certified as per EN 1300 by both A2P and VdS.
Fitting Moneo locks on your safe will deliver optimum protection for your valuables. These locks are even mandatory for Grade VI certified safes.
- ✦ Widely acknowledged by experts and a privileged choice for several ministries
- ✦ Two versions are available: touch-sensitive or exclusively visual and silent
- ✦ Automatic scrambling on opening
- ✦ Code search made impossible
- ✦ The silent visual version prevents any listening during code input
- ✦ Passive relocker triggered by any forceful action
- ✦ Double-course bolts (11 and 15mm) for permanent locking
- ✦ Each dial is independent, which allows for correcting input errors without affecting other dials (no need to reset to 0)

A2P certification grades (safes)	Grade I to V	Grade VI+
Number and types of locks	1 MxB/B + 1 Moneo	1 MxB/C + 1 Moneo
